1. Signing in

Open employees.dandrenel.co.za in any browser. Enter the email address and password you were given and choose Sign in.

The system is used by administrators only.

If the details are wrong you are told "Invalid email or password". After five failed attempts in a minute the system pauses further attempts for a short period.

2. Finding your way around

The dark blue bar on the left is the main menu, and it stays visible on every page.

Menu item	What you use it for
Dashboard	A summary of the organisation
Org chart	The reporting structure as a diagram
Employees	The full list, with sorting, filtering, import and export
Departments	Creating and editing departments

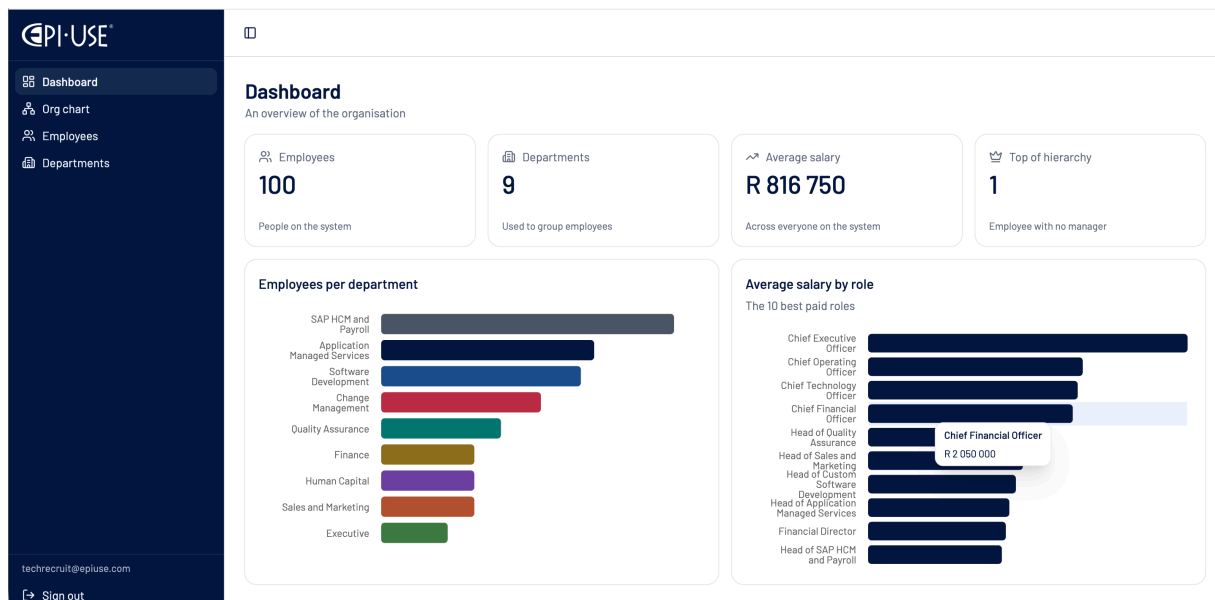

Your email address and the Sign out button are at the bottom of the menu. The small button at the top of the page collapses the menu if you want more room.

3. Dashboard

The dashboard opens when you sign in and gives you four figures at a glance: the number of employees, the number of departments, the average salary, and how many people sit at the top of the hierarchy with no manager.

Below those are two charts: headcount by department, drawn in each department's own colour, and average salary by role.

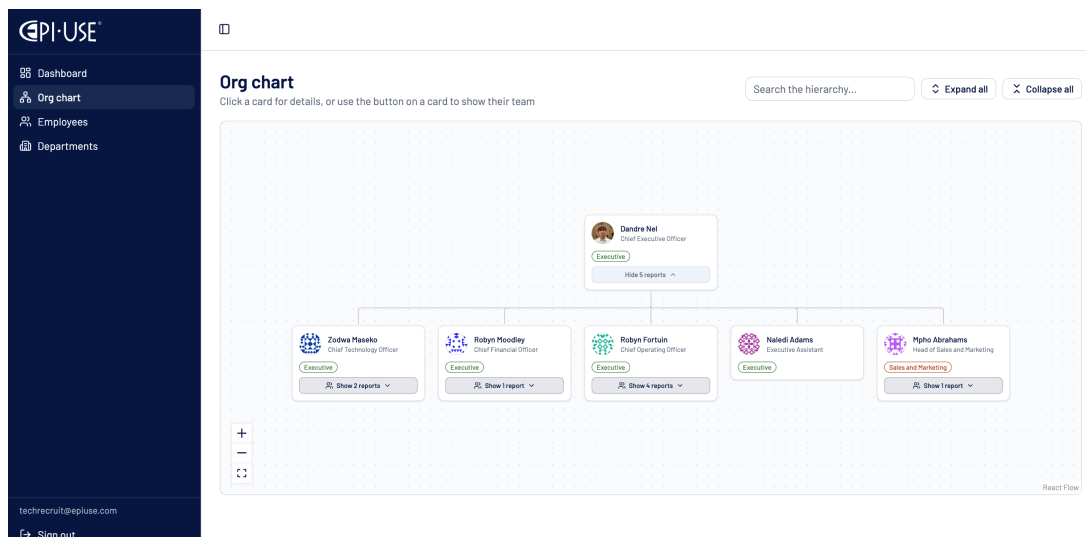

Hovering over any bar shows the exact figure.

4. Org chart

The org chart shows who reports to whom.

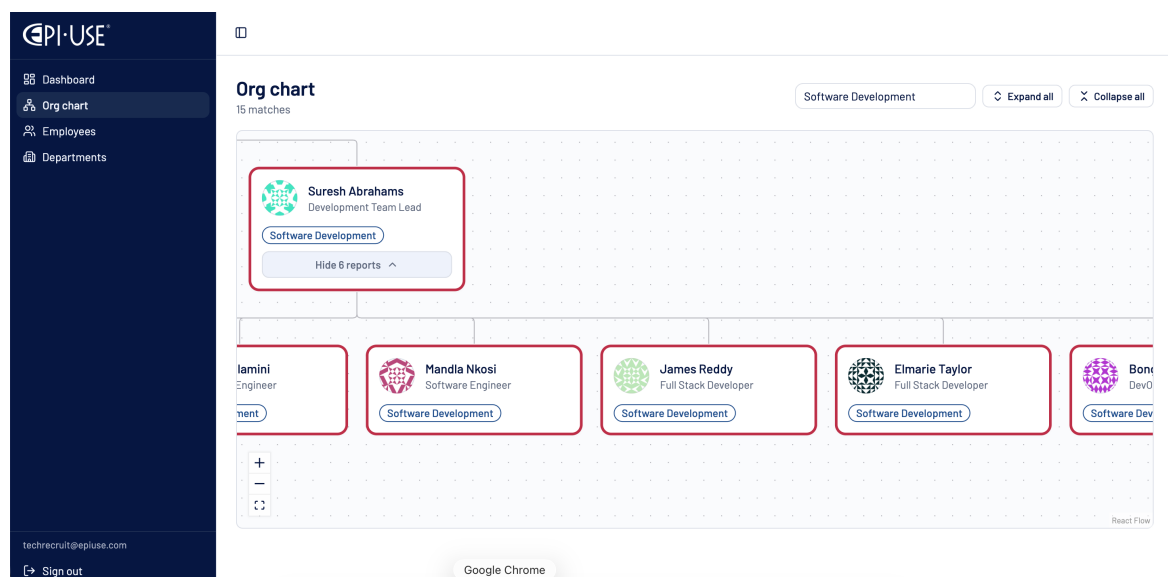

When you open it, only the top of the organisation is shown. Each card that has a team beneath it has a Show n reports button along the bottom. Choose it to reveal that team, and Hide n reports to fold it away again.

To do this	Do that
Expand one team	Choose Show n reports on that card
Expand everything	Expand all at the top right
Collapse everything	Collapse all at the top right
Move around	Drag the background
Zoom	Scroll, or use the buttons at the bottom left
Fit the whole chart on screen	The square button at the bottom left

Searching

Type a name, email address, role, employee number or department into Search the hierarchy. Matching cards are outlined in red, the view moves to the first match, and the heading tells you how many matches there are. Clearing the search returns the chart to its original position.

Looking at one person

Choose any card to open a panel on the right showing their full details, the reporting line from the top of the organisation down to them, and everyone who reports to them. Edit and Delete are at the bottom of the panel.

5. Employees table

The table lists everyone, and is the quickest way to find and change records. The heading tells you how many employees are shown out of the total. Use the search bar to search for an employee.

Bradley Anderson bradley.anderson@example.com	EMP-0037	Business Analyst	Change Management	Stefan Roberts	R 720 000	09 Oct 2000	...

Sorting

Choose any column heading to open its menu, then pick the order. Salary offers lowest or highest first, dates offer oldest or newest first, and text columns offer A to Z.

The sorted column is shaded, and a line above the table reminds you what is sorted and in which direction. Use the small cross there, or Clear sort in the column menu, to remove it.

Salary ↓

Birth date ↕

↑ Sort lowest first

↓ Sort highest first

✕ Clear sort

Filtering

The row of buttons above the table filters the list.

Filter	How it works
Search everyone	Matches any field
Department, Role, Manager	Tick one or more values, the number beside each shows how many employees match
Salary, Birth date	Enter a from and a to value, leaving one blank means no limit

Filters combine, so you can look at SAP consultants in one department earning above a certain figure. Reset filters clears them all.

Cancel

Save

Field	Notes
Name, Surname	Required
Email	Required and unique. Also used to find the person's Gravatar picture
Birth date	The employee must be at least 16
Salary	Whole rands. Yearly Salary
Role	Their job title, for example SAP Payroll Consultant
Department	Optional
Manager	Optional. Leave as No manager for the top of the organisation

The employee number is generated automatically as EMP-0001 upwards.

If something is wrong, the problem appears beneath the field or in a red box at the bottom of the dialog, and nothing is saved until it is corrected.

7. Editing an employee

Open the row menu at the right of any row in the table and choose Edit, or use Edit in the org chart's details panel. The form is the same one used for adding.

Changing someone's manager

Choose a different person in the Manager list and save.

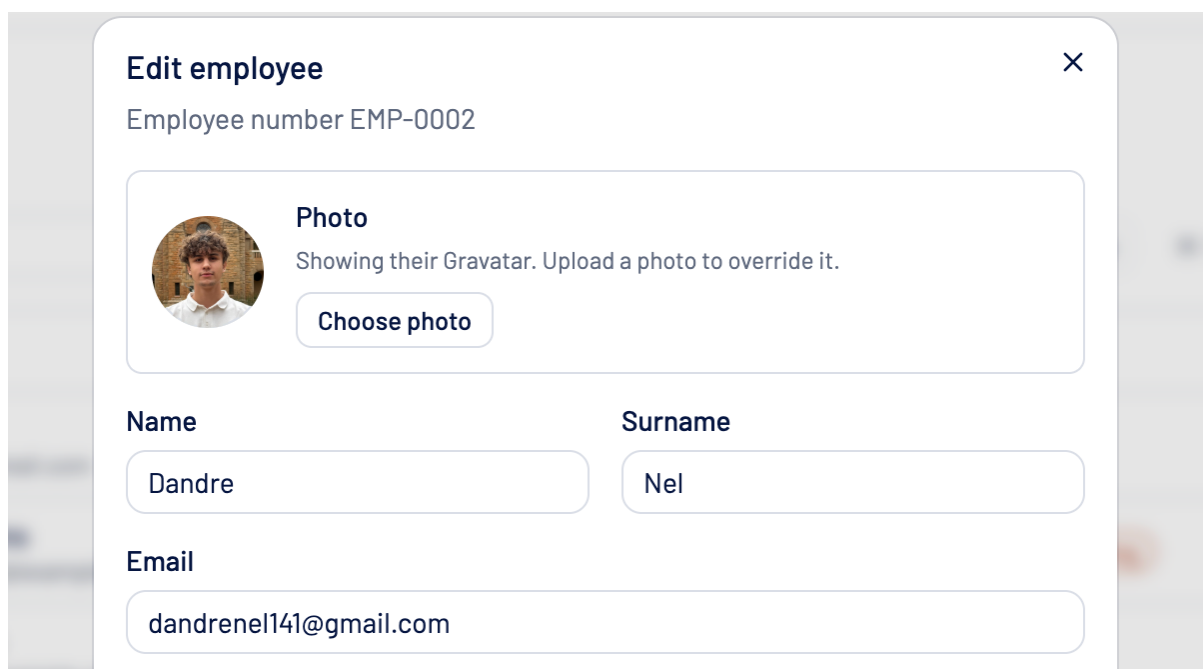

The list only offers people who can validly manage them. Anyone who already reports to this person, directly or further down the chain, is left out, because that would create a circle with nobody at the top.

8. Profile photos

Pictures come from Gravatar, matched on the employee's email address. An employee with a Gravatar account shows their own photo, everyone else gets a generated pattern from Gravatar unique to their address.

You can also upload a photo directly, which is shown in place of the Gravatar.

1. Edit the employee
2. Choose photo and select a JPEG, PNG or WebP image under 2 MB
3. Choose Save

To go back to the Gravatar, choose Remove and then save.

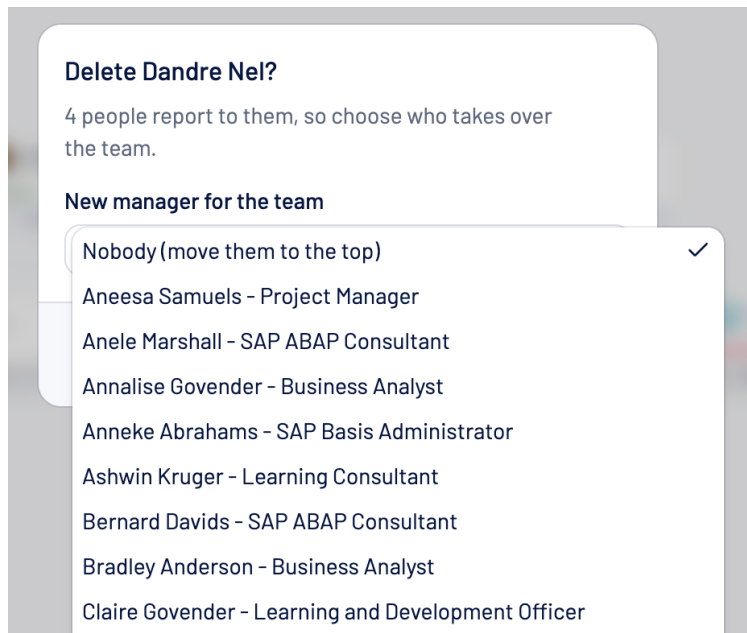

9. Deleting an employee

Choose Delete from the row menu or the org chart panel.

If the person has nobody reporting to them, confirm and they are removed.

If they manage a team, you are asked what should happen to that team:

Choice	Result
Nobody	The team moves to the top of the organisation with no manager
Another employee	The whole team reports to that person instead
One of their own reports	That person takes over the role, and their colleagues report to them

The change and the deletion happen together, so the hierarchy is never left in a broken state.

10. Departments

Departments group employees and give them a colour that appears on their badge in the table and on the org chart.

- Add department creates one. Give it a name and pick a colour, either from the swatches, the colour picker or by typing a hex value
- The row menu offers Edit and Delete
- The Employees column shows how many people are in each department

A department cannot be deleted while people are still assigned to it. Move them first.

11. Importing employees from a spreadsheet

Use Import on the Employees page to add many people at once.

Your file must be a CSV with these columns, in this order:

`first_name,last_name,email,birth_date,salary,role,department,manager_email`

- `birth_date` must look like 1990-04-12
- `salary` is a plain number, for example 650000
- `department` is created automatically if it does not exist yet
- `manager_email` is the email address of that person's manager. Leave it empty for the top of the organisation. The manager may appear anywhere in the file, or already be on the system

A screenshot of a web application dialog box titled "Import employees" with a close button (X) in the top right corner. The dialog contains the instruction "Upload a CSV file." followed by a section titled "Required columns" which displays the column names: "first_name,last_name,email,birth_date,salary,role,department,manager_email". Below this, a note states: "Leave manager_email empty for the top of the hierarchy. Departments that do not exist yet are created." At the bottom left, there is a "Choose file" button with an upload icon and the text "No file chosen". At the bottom right, there are "Cancel" and "Import" buttons.

Every row is checked before anything is saved. If there is a problem, the file is rejected and each issue is listed with its row number, for example "Row 14: no employee found with the manager email siphon@example.com". Correct the file and try again.

When the file is valid, everyone is added at once and you are told how many were imported.

12. Exporting employees

Export on the Employees page downloads what you are currently looking at, including any sorting and filtering, as a CSV file.

The file uses the same columns as the import.

13. Signing out

Choose Sign out at the bottom of the menu. You are signed out automatically after eight hours.
